CERTIFICATIONS

AWS Certified Solutions Architect – Associate (2026) | CompTIA Security+ (2024)

EXPERIENCE

Course Learning Assistant | Florida International University | FIU STARS | Miami, Florida Sep 2025 — Apr 2026

- Tutored 360+ students per semester across Python, Java, C, OS, and Networking, conducting code reviews and debugging sessions with 75% of students raising grades and returning consistently throughout semester

Hardware Lab Assistant | Florida International University | KFCIS Cyber Lab | Miami, Florida Sep 2024 — Apr 2025

- Built a 3-tier CTF from scratch with a team, introducing first hands-on security practice environment in department and driving 40+ students to voluntarily complete challenges outside of class
- Led design of an automated Kali Linux VM system with a 5+ person team, where daily instance resets enabled 150+ students to run live attack and defense scenarios per semester with zero risk of persistent infrastructure damage

PROJECTS

Radius — Cloud Identity Threat Detection System | Personal Project Mar 2026 — Apr 2026

- Architected an event-driven IAM threat detection platform built for AWS Organizations using Claude Code and Kiro agentic AI agents, 7 detection rules covering privilege escalation, root activity, and API bursts — computing per-identity Blast Radius Scores to prioritize compromise impact, validated with 192-test suite at 89% coverage
- Engineered automated incident response pipeline — auto-disabling compromised IAM principals and revoking sessions in seconds versus 45–60 minutes manual average, recovering an estimated \$13,000+/year in analyst time for 50+ identity organizations

AnomAI — AWS IAM Anomaly Detection Platform | Capstone Most Innovative Project Award Jan 2026 — Apr 2026

- Drove core backend engineering across a 5-person team — S3-triggered Lambda pipeline, 6 self-calibrating anomaly detectors, full Terraform IaC, and Flask REST API with AI-powered analyst dashboard, deployed against a real single account CloudTrail dataset surfacing IAM incidents across 120 days with zero manual threshold tuning
- Eliminated an estimated \$5,300+/year in analyst triage labor per AWS account — replacing 32 hours of manual CloudTrail investigation annually with always-on behavioral baseline monitoring requiring zero ongoing configuration awarded Most Innovative Project at FIU Capstone across 100+ teams

ShopEase — Enterprise Business Continuity & Disaster Recovery | Class Project Jan 2026 — Apr 2026

- Produced a 30+ page BCP and DRP for a simulated e-commerce enterprise across 5 processes — translating a full BIA, risk assessment, and threat analysis into PCI-DSS-aligned recovery plans with 2hr RTO and 15-min RPO targets for payment processing
- Mapped 8 scenario-specific DR runbooks covering SQL injection, DDoS, IAM breach, and AWS region failover against a multi-region active-passive architecture — surfacing 3 critical gaps and reducing simulated mean recovery exposure by 83% across mission-critical systems

AI-Assisted Security Assurance Framework | U.S. Cyber Command Defender Award Oct 2025 — Apr 2026

- Generated a Gemini-powered pipeline automatically identifies security framework gaps in defense-critical system architecture before deployment — tested on 5G drone documentation against ISO/IEC 15408, cutting manual review from days to minutes across 5,000+ pages
- Achieved 83.3% expert agreement with zero high-risk false positives, earning the Defender Award at a U.S. Cyber Command-sponsored national competition across 28 teams

LEADERSHIP & ACTIVITIES

CCDC Regional Qualifier | Blue Team Competition Feb 2026

- Captained 5-person team to 16th place out of 49 teams — prepared and executed full defensive security strategy in under one week against teams of 8–12 with year-long preparation cycles

EDUCATION

B.S. Computer & Information Systems Security | Florida International University | Miami, FL May 2026

- GPA: 3.82/4.0 | Undergraduate Certificate in Cybersecurity Intelligence & Information Policy
